1 Chapter Summary and Highlights

In the Chapter, the mechanical behaviors of elastoplastic materials is tested. The purpose is to simulate the simplest material points or the simplest solid brick for the sake of education.

Section.2 and Section.3 are testing one material point directly.

Section.4 and Section.5 are testing the material (Gauss Points) through the 8-node solid brick element.

Distinct yield surfaces are tested, including von-Mises and Drucker-Prager yield surfaces with associative and non-associative plastic flow.

Likewise, various hardening rules are simulated, including isotropic hardening, kinematic hardening, Armstrong-Frederick hardening, and multi-yield-surface hardening.

2 Elastic Solid Constitutive Examples

2.1 Linear Elastic Constitutive Examples

Pure Shear, Monotonic Loading

Material Parameters:

```

1  model name "test";
2  add material # 1 type linear_elastic_isotropic_3d
3      mass_density = 2E3 * kg/m^3
4      elastic_modulus = 2E7 * Pa
5      poisson_ratio= 0.25 ;
6  simulate constitutive testing strain control pure shear use material # 1
7      confinement_strain = 0.001
8      strain_increment_size = 0.0001
9      maximum_strain = 0.01
10     number_of_increment = 100;
11  bye;

```

Material Response:

Figure 1: Linear Elastic Pure Shear Monotonic Loading

The fei files for this example are available [here](#).

Pure Shear, Cyclic Loading

Material Parameters:

```

1 model name "test";
2 add material # 1 type linear_elastic_isotropic_3d
3   mass_density = 2E3 * kg/m^3
4   elastic_modulus = 2E7 * Pa
5   poisson_ratio= 0.25 ;
6 simulate constitutive testing strain control pure shear use material # 1
7   confinement_strain = 0.001
8   strain_increment_size = 0.0001
9   maximum_strain = 0.01
10  number_of_increment = 500;
11 bye;

```

Material Response:

Figure 2: Linear Elastic Pure Shear Cyclic Loading

The fei files for this example are available [here](#).

Uniaxial Strain, Monotonic Loading

Material Parameters:

```

1 model name "test";
2 add material # 1 type linear_elastic_isotropic_3d
3   mass_density = 2E3 * kg/m^3
4   elastic_modulus = 2E7 * Pa
5   poisson_ratio= 0.0 ;
6 simulate constitutive testing strain control uniaxial loading use material # 1
7   confinement_strain = 0.001
8   strain_increment_size = 0.0001
9   maximum_strain = 0.01
10  number_of_increment = 100;
11 bye;

```

Material Response:

Figure 3: Linear Elastic Uniaxial Monotonic Loading

The fei files for this example are available [here](#).

Uniaxial Strain, Cyclic Loading

Material Parameters:

```

1 model name "test";
2 add material # 1 type linear_elastic_isotropic_3d
3   mass_density = 2E3 * kg/m^3
4   elastic_modulus = 2E7 * Pa
5   poisson_ratio= 0.25 ;
6 simulate constitutive testing strain control pure shear use material # 1
7   confinement_strain = 0.001
8   strain_increment_size = 0.0001
9   maximum_strain = 0.01
10  number_of_increment = 500;
11 bye;

```

Material Response:

Figure 4: Linear Elastic Uniaxial Cyclic Loading

The fei files for this example are available [here](#).

3 Elastic Plastic Solid Constitutive Examples

3.1 Elastic Perfectly Plastic Constitutive Examples

Pure Shear

Material Parameters:

```

1  model name "test";
2  add material # 1 type VonMises
3    mass_density = 2E3*kg/m^3
4    elastic_modulus = 2E7 * Pa
5    poisson_ratio=0.25
6    von_mises_radius = 1E5*Pa
7    kinematic_hardening_rate = 0.0 *Pa
8    isotropic_hardening_rate = 0.0*Pa ;
9  define NDMaterial constitutive integration algorithm Backward_Euler
10    yield_function_relative_tolerance = 1E-2
11    stress_relative_tolerance = 1E-3
12    maximum_iterations = 30;
13  simulate constitutive testing strain control uniaxial loading use material # 1
14    confinement_strain = 0.001
15    strain_increment_size = 0.0001
16    maximum_strain = 0.01
17    number_of_increment = 500;
18  bye;

```

Material Response:

Figure 5: Perfectly Plastic Pure Shear Cyclic Loading

The fei files for this example are available [here](#).

Uniaxial Strain

Material Parameters:

```

1 model name "test";
2 add material # 1 type VonMises
3   mass_density = 2E3*kg/m^3
4   elastic_modulus = 2E7 * Pa
5   poisson_ratio=0.25
6   von_mises_radius = 1E5*Pa
7   kinematic_hardening_rate = 0.0 *Pa
8   isotropic_hardening_rate = 0.0*Pa ;
9 define NDMaterial constitutive integration algorithm Backward_Euler
10  yield_function_relative_tolerance = 1E-2
11  stress_relative_tolerance = 1E-3
12  maximum_iterations = 30;
13 simulate constitutive testing strain control uniaxial loading use material # 1
14   confinement_strain = 0.001
15   strain_increment_size = 0.0001
16   maximum_strain = 0.01
17   number_of_increment = 500;
18 bye;

```

Material Response:

Figure 6: Perfectly Plastic Uniaxial Cyclic Loading

The fei files for this example are available [here](#).

3.2 Elastic Plastic, Isotropic Hardening, Constitutive Examples

Pure Shear, Monotonic Loading

Material Parameters:

```

1  model name "test";
2  add material # 1 type VonMises
3      mass_density = 2E3*kg/m^3
4      elastic_modulus = 2E7 * Pa
5      poisson_ratio=0.25
6      von_mises_radius = 1E5*Pa
7      kinematic_hardening_rate = 0.0*Pa
8      isotropic_hardening_rate = 2E6 *Pa ;
9  define NDMaterial constitutive integration algorithm Backward_Euler
10     yield_function_relative_tolerance = 1E-2
11     stress_relative_tolerance = 1E-3
12     maximum_iterations = 30;
13  simulate constitutive testing strain control pure shear use material # 1
14     confinement_strain = 0.001
15     strain_increment_size = 0.0001
16     maximum_strain = 0.01
17     number_of_increment = 99;
18  bye;

```

Material Response:

Figure 7: Isotropic Hardening Pure Shear Monotonic Loading

The fei files for this example are available [here](#).

Pure Shear, Cyclic Loading

Material Parameters:

```

1 model name "test";
2 add material # 1 type VonMises
3   mass_density = 2E3*kg/m^3
4   elastic_modulus = 2E7 * Pa
5   poisson_ratio=0.25
6   von_mises_radius = 1E5*Pa
7   kinematic_hardening_rate = 0.0*Pa
8   isotropic_hardening_rate = 2E6 *Pa ;
9 define NDMaterial constitutive integration algorithm Backward_Euler
10  yield_function_relative_tolerance = 1E-2
11  stress_relative_tolerance = 1E-3
12  maximum_iterations = 30;
13 simulate constitutive testing strain control pure shear use material # 1
14   confinement_strain = 0.001
15   strain_increment_size = 0.0001
16   maximum_strain = 0.01
17   number_of_increment = 499;
18 bye;

```

Material Response:

Figure 8: Isotropic Hardening Pure Shear Cyclic Loading

The fei files for this example are available [here](#).

Uniaxial Strain, Monotonic Loading

Material Parameters:

```

1 model name "test";
2 add material # 1 type VonMises
3   mass_density = 2E3*kg/m^3
4   elastic_modulus = 2E7 * Pa
5   poisson_ratio=0.25
6   von_mises_radius = 5E4*Pa
7   kinematic_hardening_rate = 0.0*Pa
8   isotropic_hardening_rate = 2E6 *Pa ;
9 define NDMaterial constitutive integration algorithm Backward_Euler
10  yield_function_relative_tolerance = 1E-2
11  stress_relative_tolerance = 1E-3
12  maximum_iterations = 30;
13 simulate constitutive testing strain control uniaxial loading use material # 1
14  confinement_strain = 0.001
15  strain_increment_size = 0.0001
16  maximum_strain = 0.01
17  number_of_increment = 99;
18 bye;

```

Material Response:

Figure 9: Isotropic Hardening Uniaxial Monotonic Loading

The fei files for this example are available [here](#).

Uniaxial Strain, Cyclic Loading

Material Parameters:

```

1  model name "test";
2  add material # 1 type VonMises
3    mass_density = 2E3*kg/m^3
4    elastic_modulus = 2E7 * Pa
5    poisson_ratio=0.25
6    von_mises_radius = 5E4*Pa
7    kinematic_hardening_rate = 0.0*Pa
8    isotropic_hardening_rate = 2E6 *Pa ;
9  define NDMaterial constitutive integration algorithm Backward_Euler
10   yield_function_relative_tolerance = 1E-2
11   stress_relative_tolerance = 1E-3
12   maximum_iterations = 30;
13  simulate constitutive testing strain control uniaxial loading use material # 1
14   confinement_strain = 0.001
15   strain_increment_size = 0.0001
16   maximum_strain = 0.01
17   number_of_increment = 499;
18  bye;

```

Material Response:

Figure 10: Isotropic Hardening Uniaxial Cyclic Loading

The fei files for this example are available [here](#).

3.3 Elastic Plastic, Kinematic Hardening, Constitutive Examples

Pure Shear, Monotonic Loading

Material Parameters:

```

1  model name "test";
2  add material # 1 type VonMises
3      mass_density = 2E3*kg/m^3
4      elastic_modulus = 2E7 * Pa
5      poisson_ratio=0.25
6      von_mises_radius = 1E5*Pa
7      kinematic_hardening_rate = 2E6*Pa
8      isotropic_hardening_rate = 0.0*Pa ;
9  define NDMaterial constitutive integration algorithm Backward_Euler
10     yield_function_relative_tolerance = 1E-2
11     stress_relative_tolerance = 1E-3
12     maximum_iterations = 30;
13  simulate constitutive testing strain control pure shear use material # 1
14     confinement_strain = 0.001
15     strain_increment_size = 0.0001
